Smart. Easy. Flexible.

Intelligent value storage

Valueboxes for all purposes!

ValueBox increases control of your valuables.

Choose models that suit your needs

Creone supplies simple and flexible solutions for value storage no matter what the environment. We offer a wide range of cabinets in different sizes for all type of needs; pharmaceuticals, valuables, etc. You can choose small or large compartments and you can easily expand your system to grow with your needs.

Control

ValueBox gives you total control over your valuables or pharmaceuticals. All of our Valueboxes have code locks and you can easily decide who should be given access to a certain cabinet or locker. If you choose a ValueBox from our System series, you also have the ability to retrieve a history or information about a certain door or compartment directly in the display.

Flexibility

All of our Valueboxes are flexible and can easily be adapted to suit the user's needs. Begin with storage with a few compartments and then add on as the need arises. ValueBox can be expanded with several cabinets in a network or by connecting additional satellite cabinets to a main cabinet. Up to 15 additional Valueboxes can be added to the B and S series.

Easy to use

Valuebox is not only easy to administrate, it is also easy to install. As a user, you will be given a code to enter when you are retrieving or leaving your valuables. The code may be valid for a door or for a specific compartment.

Basic, System, Expansion – easy and flexible.

Choose the system that suits you and your organisation.

The ValueBox series is adapted for the storage of different types of valuables and pharmaceuticals. The cabinets are available with 2, 3, 4, 5 or 6 compartments. ValueBox comes in Basic (B) or System (S). The Basic series is somewhat simpler while the System series has displays and offers more functions. The Expansion series (E) functions with both the Basic and System series.

Basic (B)

The Basic series (B) is based on simplicity and safety. The ValueBox is equipped with a keypad for entering codes and programming. The cabinet has a red diode that indicates that the cabinet is active, which blinks more frequently when in Service mode.

Eight different codes can be programmed per compartment. The cabinet is available in different models with 2 to 6 compartments. Up to 15 expansion cabinets can be added on in any combination, which means that you can have up to 96 compartments in the same system, all managed by the same keypad.

System (S)

The System series (S) is a flexible and intelligent range of Valueboxes where the keypad is complemented by a display, to provide a good overview and simple programming. The cabinet manages up to 1,200 codes (1-6 digits) and stores up to 4,000 events. The system series can also be connected to a PC and administration is performed using KeyWin Light.

The cabinet is available in different models with 2 to 6 compartments. Up to 15 expansion cabinets can be added on in any combination, which means that you can have up to 96 compartments in the same system, all managed by thesame keypad.

Expansion (E)

The Expansion-series (E) is a series of expansion cabinets that can be combined with the different ranges according to the need for storage compartments. A main cabinet in the Basic or System range can be expanded using up to 15 expansion cabinets. The Expansion boxes are managed and controlled by the keypad on the main cabinet.
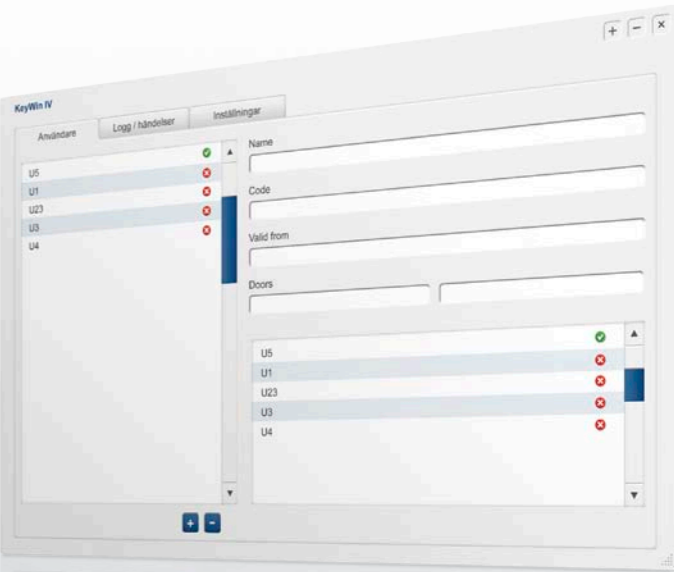

KeyWin Light*

KeyWin is a PC program that increases the control and monitoring of key management. KeyWin is comprehensive and very easy to administer. All events are registered and saved in in KeyWin.

KeyWin Light can be used with the Basic and System series. Transfer of codes and logs is made via USB memory. By plugging a USB memory in the cabinet as well as entering the service code, you can easily enter new codes in the cabinet, or download the event log to the USB memory. In the computer you can then simply add, delete or edit codes as well as search information in the event log.

In the Basic series, codes can easily be administered in the computer via KeyWin Light and can then be uploaded to the cabinet via a USB memory.

With the System series, you can easily administrate codes and search in the event log from ValueBox via a USB memory.

*To be launched in the fall of 2010.

Models for Basic, System och Expansion.

7003 B
ValueBox in the Basic series with 3 storage compartments.
Exterior dimensions: 745x460x270 mm.
Weight: 20 Kg
